SEEDS

MERLOT:

All we can say is wow, again, a proven genetic to boast large yields of citrus/cherry laden flowers ranging from beautiful purples to light shades of green. This strain was planted fairly late all throughout California and amazed growers with it explosive growth and yields – if only you could imagine the size of plants and yields when planted early!

Heritage: Cherry wine X Cherry B

Recommended spacing:
6X6 can vary based on planting time

Yield: 3-5 lbs

Harvest Time: beginning October

WU5:

This indica dominant strain is unlike anything we've seen! She a slow vegging plant, so try to get in before July! Very stable, uniform growth throughout the whole line that is extremely mold resistant, the flowers are so trichome packed it will blow minds, and if that doesn't the smell will- hints of SFV OG and sweet OG are reminiscent. Once again, this strain will grow literal rock hard flower that are the prettiest we have EVER seen!

Heritage: OG KUSH X SOUR
DIESEL X HIGH CBD CULTIVAR

Harvest Time: Mid to Late October

Spacing: 5X5

Yield: 0.5-2 lbs a plant

ULTRA CHERRY:

Massive terpene profile with superb sweet sour cherries, superb plant for biomass, and smokeable flower!

Heritage: Merlot X Cherry Wine

Harvest Time: Early October

SPECTRUM:

Spectrum is a solid yielder with an extremely vigorous growth rate- superb for planting later in the season. She is a very hardy plant, tolerant to several environments as its been a proven genetic all around the country!

Heritage: Z7 X Cannatonic

Recommended plant spacing:

6X6 -can vary based on planting time

Harvest Time: Early-Mid October

Yield: 1-5 lbs

ABUCUS:

Massive terpene profile with superb sweet sour cherries, superb plant for biomass, and smokeable flower!

Heritage: Merlot X Cherry Wine

Harvest Time: Early October

CHERRY DIESEL:

The pinnacle of smokeable flower! To this date we still haven't found a more dense, sweet cherry diesel aroma out of a hemp flower. Truly proud of this strain, finishes first week or so of October, expect nice bushes that have incredible mold resistance and hold their weight and handle high winds like a champ!

Heritage: Wu5 X Cherry Uno

Harvest Time: first week of October

Yield: 1-3 lbs

Plant Spacing: 5X5

AUTO FLOWER SEEDS

BLEUGENIUS AUTOFLOWER:

This is a highly coveted autoflower, it has some of the prettiest flowers of any auto on earth, expect a field of mixed phenos with about 50% being superb for smokable flower and the rest great for biomass, or pre roll product! Flower range from beautiful light green to exotic purples with smells of tropical gas!

Heritage: Unknown Israeli Strain

AUTO 3.0:

One of the best, consistent auto flowers we have ever witnessed. Superb stability with some of the largest yields of any auto-flower in the world. Flowers tend to be of medium density, great for smokable flower or biomass!

Heritage: Unknown

Flower to finish: 80-90 days

Plants per acre: 7000-10,000

Yield: 3000-5000 lbs an acre

EARLY GIRLS

EB ABACUS

This is the holy grail of fast growing, early finishing genetics. Not an auto flower but finishes 1st week of September, average around 1.5-2 lbs of good biomass per plant. Has minor cannabinoids of CBDV and CBC which comes out to be almost 5% in extracted oil. Can grow higher plants per acre for phenomenal biomass weight per acre. Great for large scale hemp farming, and northern climates prone to early rainy seasons.

Harvest time: 1st week of September

Yield: 3500-10,000 lbs an acre

ABACUS 2.0:

This cultivar is superb for high end smokable flower, boasting a true OG terpene profile. We truly believe this is the pinnacle of smell, flavor and looks when it comes to cbd flower!

Heritage:

OG KUSH X purple urkle X high cbd cultivar

Harvest time: September 21st
